

This hackathon is a two-phase event. Your journey begins with submitting a presentation of your proposed solution. The deadline for this pre-selection submission is **September 19th, 10 PM**. Based on these presentations, selected teams will be invited to the main 9-hour hackathon to build their prototypes.

You have two options for your project:

1. Choose one of the detailed problem statements from the provided list (problem\_statement\_list.pdf)
2. Propose your own unique problem in software, AI, IoT & blockchain, as long as it aligns with one of the core themes listed by us, such as Healthcare & Life Sciences, Sustainable Tech & Climate Solutions, or Education & Community.

Selected teams will code, build and demonstrate a working prototype on the final hackathon day. Prepare to innovate and build solutions that matter. We look forward to seeing your ideas!
